LINE CELLS. PLAYS A ROLE IN GERM LINE SEX DETERMINATION.

LINE CELLS. PLAYS A ROLE IN GERM LINE SEX DETERMINATION.

-1- SUBCELDULAR LOCATION: Naclear (Pocential).

C.-1- DEVELOPMENTAL STAGE: FIRST APPEARS IN THE GERMARIUM AND ACCUMULATES IN NURSE CELLS DURING OGGENESIS. STORED IN THE EGG,

BUT IS RAPIDIX LOST IN THE EMBRYOS EXCEST FOR ITS CONTINUED

C. PRESENCE IN THE GERM LINE PRECURSOR POLE CELLS.

60uter membrane protein B precursor (168 Kba surface-layer protein)
60utface protein annigen) (Cell surface antigen 5) (Sca5) (rômpB)
610-MAT AND B) (Contains: 120 Kba surface-exposed protein (Surface protein antigen) (120 Kba outer membrane protein ompB); 32 Kba beta peptidel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   similarity).

-i- FUNCTION: THE 32 KDA BETA PEPTIDE MAY SERVE AS A MEMBRANE ANCHOR (BY similarity).

-i- SUBCELLULAR LOCATION: Cell wall. This bacterium is covered by a £ layer with hexagonal symmetry.

-i- SIMILARITY: BELONGS TO THE RICKETTSIAE OMPA/OMPB FAMILY.
                                                                                                                                                                         63 ARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDI-----

Microbiol. 6:3493-3499(1992).
-!- FUNCTION: Serves as a slightly cation selective porin.
-!- SUBGNIT: Homotrimer.
-!- SUBCELLULAR LOCATION: Integral membrane protein. Outer.
-!- SIMILARITY: Belongs to the Gram-negative porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KSDYLGVNKIAEPEARLISVRYDSPEFAGLSGSVQYALNDNAGKY 172

ALIGNMENTS

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal. The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative fimbriae (SETI/TAF) nucleation depended assembly system of strains of Salmonella, Bscherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-honologue filmbrin subunits, respectively, (2) directing recombinant gene into the chromosome of the homologous species, (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native Salmonella, agfA; chromosomal gene replacement; fimbrin; epitope; AgfA::PT3#2 amino acid sequence SEQ ID NO:14. M Kay Disclosure; Page 136; 139pp; English. vaccine; immune response; immunogen. Collison SK, AAB36347 standard; protein; 151 AA. 05-APR-2000; 2000WO-CA000356. 99US-0127888P. ```
copy of that gene; and (4) eliciting an immune response in an animal, compurising separating an amino acid polymer comprising a recombinant Agfa protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonalia, E. ool or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant Agfa protein which is useful for into the expression of recombinant Agfa protein which is useful for eliciting an immune response in an animal. In a finbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                  o.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA consequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbriae (SEPI)/TAP) mucleation depended assembly system of strains of Salmonella. Escherichia coli and Enterobacteriacae for the production of finbriae comprising recombinant C. AgfA, CspA and AgfA-homologue finbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologus species; (3) directing recombination of a recombinant gene comprising separating and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino acid segment or segments of soli or. Enterobacteriaceae host cell, from the nost cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for clitting an immune response in an animal. In a fimbrial presentation system the hererologous antigens are presented in high numbers (up to coliciting an immune response in an animal. In a fimbrial presentation vaccine, the carrier fimbrial submit proteins are usually strong immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial submit proteins are usually strong immunogensive to purify in large amount. The present sequence is given in the exemplification of the present invention response to purify in large amount. The present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYDQ 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicepe or antigen. Also described are: (I) use of thin aggregative finbriae (SEP17/TAP) nucleation depended assembly system of strains of Salmonella. Escherichia coli and CE Enterobacteriaceae for the production of finbriae comprising recombinant CE AgfA, CSpA and AgfA-homologue finbrin subunits, respectively; (2) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. CC comprising separating an animo acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or Comprising recombinant AgfA protein containing a replacement segment or regenets of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Defining an immune response in an animal. In a finite direction of recombinant AgfA protein which is useful for an animal and man and an animal and an animal and an animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal and animal animal and animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animanimal animal animal animal animal animal animal animal animal ani
                                                                                                                                                         Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 SDARKSETTITQSGYGNGADVGQGADNSTIBLTQNGFRNNATIDQWNAKNSDITVGQYGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MKLLKVAAFAAIVVSGSALAGVVPQWGGGGNHNGGGNSSGPDSTLSIYQYGSANAALALQ

The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 2765-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or eneropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probase or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella acid molecules from warm-blooded animals relative to nucleic 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYDQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                          The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA cequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SERI/TAR) mucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant of monologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native compositing secreting recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising recombinant AgfA comprising separating an amino acid polymer comprising recombinant of comprising separating an amino acid polymer comprising recombinant of protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or containing a replacement segment or segments of foreign amino containing a mannel in conjunction with a carrier or diluent. (I) is useful for the animal in conjunction with a carrier or diluent. (I) is useful for the animal in conjunction with a carrier or diluent. (C) coliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to c) immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogenicity and adhesion properties relevant for an efficient live the exemplification of the present invention invention in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0
                                               Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYDQ 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA control of the gene has been replaced by a segment of a foreign DNA control of the encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbriae (SERIA/TAR) mucleation depended assembly system of strains of Salmonella Escherichia coli and control of the production of fimbriae comprising recombinant of a recombination of a recombination of a recombination of a recombinant gene chomologus species; (3) directing recombination of a recombinant gene into the chromosome of the homologus species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or containing a replacement segment or segments of foreign amino cold sequence or sequences grown on a Salmonella, E. coli or coliciting an immune response in an animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein sea usually strong immunogens, which may be important for an efficient live vaccine, the carrier fimbrial submuit proteins are usually strong immunogens, which may be important for an efficient live vaccine, the carrier fimbrial submuit proteins are usually strong aminored the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                     Disclosure, Page 139; 139pp; English.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbried (SERIJ/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and control of a recombination control of the production of fimbried comprising recombinant GAGA, CSGA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene composition of a recombinant gene copy of that gene; and (4) eliciting an emimologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or copy. The expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to Sou, ono copies/cell), the hybrid fimbrin protein sale usually strong immunogens, which may be important for an efficient live vaccine; the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response consequence is given in the expensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                           Kay WW;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA compared which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbries (SEPT)/TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and content of the comparising recombinant of Enterobacteriaceae for the production of fimbries comprising recombinant of directing recombination of a recombination of a recombinant gene into the chromosome of the homologue species, (3) directing recombinant gene into the chromosome of the homologus species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. CC comprising separating a replacement segment or segments of foreign amino protein containing a replacement segment or segments of foreign amino containing a replacement segment or segments of introducing the protein containing a replacement segment or segments of introducing the comparation of sequences grown on a Salmonella, E. coli or comparation and industrial industrial presentation containing an immune response in an animal. In a fimbrial presentation system the hererologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the carrier finbrial subunit protein seasy and immune response immunogens, which may be important for directing an immune response in an animal mannersed eaplone, and hybrid fimbrial are easy and incompaniate are presented in high numbers (up to immunogens, which may be important for directing an immune response of immunosens, which may be important for directing an immune response in an animal mannersed easy and incompaniate are subunity and incompaniate and hybrid fimbrial segment of each incompaniate and hybrid fimbrial segment of each incompaniate and hybrid fimbrial segment in the carrier of any hybrid fimbrial segment of each incompaniation in the presented in the hybrid fimbrial segment of each 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                           agfA; chromosomal gene replacement; fimbrin; epitope;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 611; DB 3; Length 151;

The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment of thin aggregative fimbriae (SETI)/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and cassembly system of strains of Salmonella, Escherichia coli and directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, respectively; (2) dack into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or dilution of recombinant AgfA protein which is useful for useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation constanting are constant for an efficient live the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation consolies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit protein possesses both the immunogens, which may be important for directing an immunogens, and aminor aminor and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in

Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgiA protein which is useful for eliciting an immune response in an animal. In a finbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid finbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SERT/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue finbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologues species; (3) directing recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination and (4) eliciting an immune response in an animal, protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbried (SEPI)/TAP) nucleation depended assembly system of strains of Salmonella Escherichia coli and cassembly system of strains of Salmonella Escherichia coli and fereting recombination of finbriaca comprising recombinant on the chromosome of the homologous species; (3) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an aminon acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence are host cell, and introducing the coll or the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant AgfA protein which is useful for system the heterologous antiqens are presented in high numbers (up to 500,000 coples/cell), the hybrid fimbrin protein possesses both the immunogens, which may be important for directing an immunogens, which may be important for directing an immunogens, and hybrid fimbrial an entitie or an interest and protein and protein security and managent and protein and protein secure and an immunogent and protein and protein and protein secure and an immunogent and protein and protein and protein secure and and interest and protein and protein secure and and interest and protein and prote
                                                                               Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 SDARKSETTIIQSGYGNGADVGQGADNSTIELIQNGFRNNATIDQWNAKNSDITVGQYGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
cc (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and combidate combacteriacae for the production of fimbriae comprising recombinant of the forbacteriacaes for the production subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a replacement sequent or sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is confusing an immune response in an animal conjunction with a carrier or diluent. (I) is confusioned the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the hererologous antigens are presented in high numbers (up to conjuct) and adhesion properties relevant for an efficient live to vaccine, the carrier fimbrial subunit proteins are usually strong community and adhesion properties relevant for an efficient live conformation. The present sequence is given in confinence in sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYDQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   \stackrel{\triangleright}{o}
                                                                                                                                                                                                                                                               The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbrine (SEPI)/TAP) nucleation depended assembly system of strains of Salmonella, Eschericha coli and Enteropacteriaceae for the production of fimbriae comprising recombinant of Enteropacteriaceae for the production of fimbriae comprising recombinant of a recombination of a recombinant on a recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant gene copy of that gene, and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement sequent or sequents of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein sare usually strong immunogens, which may be important for directing an immune response in an animal incompansive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                           Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09

The invention relates to an isolated peptide capable of binding a mammalian plasma protein or of generating an immune response in a mammal selected from sequences shown in ABREGAG4. ABREGAG4.49. The peptide or antibody is useful for treating a bacterial infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, salmonella or Shigella infection. The peptide that is immobilized on a solid support is also useful as a reagent for determining the ability of a plasma protein, to bind to bacteria. The present sequence represents an E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                              New isolated peptide capable of binding a mammalian plasma protein, useful in the manufacture of a medicament for the prevention and/or treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MKLIKVAAFAAIVVSGSALAGVVPQWGGGNHNGGGNSSGPDSTLSIYQYGSANAALALQ

US-09-477-135A-131
VS-09-477-135A
Sequence 131, Application US/09477135A
Patent No. 6572865
GENERAL INFORMATION:
APPLICANT: Nano, Francis
TITLE OF INVENTION: immunostimulatory Peptides
TITLE OF INVENTION immunostimulatory Peptides
FILE REFERENCE: 52889
CURRENT APPLICATION NUMBER: US/09/477,135A
CURRENT APPLICATION NUMBER: US/09/477,135A
PRIOR PILING DATE: 1997-12-15
PRIOR FILING DATE: 1997-12-15
PRIOR APPLICATION NUMBER: 6/000,254
PRIOR PILING DATE: 1996-06-14
PRIOR PILING DATE: 1996-06-14
PRIOR PILING DATE: 1996-06-14
PRIOR SEQIENCE: 1998-06-15
NUMBER OF SEQIEN NUMBER: 6/000,254
SOFFWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12 IVVSGSALAGVVPQWGGGGNHNGGGNSSGPDSTLSIYQYGSANAALALQSDAR---KSET 68
